SUBJECT GROUND WATER SAMPLING PLAN DATE May 12, 1986

The U.S. Environmental Protection Agency has approved our ground water sampling plan as submitted by the IT Corporation dated December 20, 1985. The Agency has also approved our request for delaying construction of these wells until August, 1986.

In order that we may proceed with construction of these wells on a timely basis appropriate communication needs to be made with IT Corporation. We are assuming that your group will make the initial contact with IT as to (1) EPAD will use their service for construction of the wells; (2) we plan to initiate the construction the week of August 4, 1986; and (3) timing for completion of construction.

Sampling and analysis of the wells will be performed by Envirodyne Engineers under the supervision of EPAD. The results of all analysis will be submitted to the U.S. E.P.A. under a cover letter signed by Sam McWilliams, Plant Manager, Sauget Plant. Copies of analytical data and any correspondence sent to the Agency will be submitted to you and David Bach for review prior to submittal to the Agency.

Please let me know if there are contacts I need to make with IT Corporation prior to construction of these wells, and any specific details or information that they will require of us.

M. J. Bonaventure
